

Selective Solder Fixture

Increase productivity and reduce defects on your mixed technology boards.

Why spend \$20,000 on a selective solder machine when your wave solder machine can perform the same task?

Protect your bottom side SMT components from excessive heat. Eliminate the risk of losing side SMT components in your wave solder machine. Eliminate the need for tapping or adding solder mask to the bottom of PCBs. Our unique design will eliminate skipping caused by the effects of outgassing. Our high tech expertise in carrier design enabled us to develop flawless selective solder fixtures.
